

Physiology Exam Triplets

List of topic triplets for the physiology oral exam.

1. Excretion of Water
Adrenal Medulla
Retina and phototransduction. Visual pathway
2. The Vascular System: Veins
Autonomic nervous system - parasympathetic division
Chemical Control of Respiration
3. Haemocoagulation
Physiological Anatomy of the Kidney
Motor functions of the spinal cord - proprioceptive reflexes
4. Cardiac muscle
Somatosensory system
Hormonal control of calcium and phosphate metabolism. Physiology of bone
5. Exchange of Gases in Alveoli and tissues
Erythropoiesis (Hematopoiesis)
Hypothalamus and posterior pituitary
6. Biological membranes
Vision
Coronary circulation and cardiac metabolism
7. Small intestine
Body fluids
The vascular system: arteries
8. General characteristics and main functions of the blood
Cardiac Contractility and Regulation
Learning
9. Glomerular Filtration
Language and functional asymmetry of the hemispheres
Adrenal cortex - Mineralocorticoids
10. Physiology of smooth muscles
The vascular system: Microcirculation
Vestibular function
11. General Properties of the Cardiovascular System
Nonspecific immune defense
Adrenal Cortex - Glucocorticoids
12. Thrombocytes
Regulation of Renal Functions
Cardiac Cycle
13. Motor functions of the spinal cord - exteroceptive reflexes
Pulmonary Circulation
Intercellular communication
14. Neuromuscular transmission
Recording of the Cardiac Activity from the Body Surface
Regulation of Body Temperature

15. Regulation of Gastrointestinal Processes
 - Hearing
 - Plasma
16. General characteristics and main functions of the blood
 - Excretion of Sodium, Chloride, Potassium and Other Ions
 - The Lymphatic System
17. Receptors
 - Conduction System of the Heart
 - The Large Intestine
18. Smell
 - Short-Term Regulation of Mean Arterial Pressure
 - General Endocrinology
19. Resting membrane potential
 - Digestion & absorption
 - Thyroid gland
20. The cerebrospinal fluid system
 - Excretion of Sodium, Chloride, Potassium and Other Ions
 - Hemocoagulation
21. Membrane transport
 - Female reproduction
 - Alert behaviour & sleep
22. Cardiac output
 - Tubular functions
 - Endocrine pancreas
23. Spirometry
 - General physiology of senses
 - Local control of tissue blood flow
24. Action potential & its propagation
 - Organization and Function of Respiratory system
 - Hemostasis
25. Endocrinology function of ovaries
 - Membrane channels
 - Taste
26. Erythrocytes
 - Cardiac cycle
 - Somatic nervous system. Motor neurons
27. Transport of CO₂
 - Neurotransmitters
 - Blood groups
28. Specific immune defenses: function of T-lymphocytes
 - Metabolism
 - Voluntary movement
29. Basal ganglia
 - Graded membrane response
 - General features of the vascular system

- 30. Higher cognitive functions
 - Transport of O₂
 - Liver & bile
- 31. ECG
 - Hypothalamus - Anterior pituitary
 - Destruction of RBC's
- 32. Autonomic nervous system - sympathetic division
 - Mouth, pharynx, oesophagus
 - Electrophysiology of cardiomyocytes
- 33. Motor functions of the brain stem & locomotion
 - General endocrinology
 - Cell morphology
- 34. The Vascular System: Microcirculation
 - Exocrine pancreas
 - Skeletal muscle
- 35. Hemostasis
 - GIT motility
 - Neural control of respiration
- 36. Specific immune defence. Function of B-lymphocytes
 - Stomach
 - Cardiac contractility and its regulation
- 37. Pregnancy and lactation
 - Action potential and its propagation
 - Humoral and long term regulation of Mean arterial pressure
- 38. White blood cells
 - Adaptation of respiration...
 - Nociception
- 39. Membrane Channels
 - Female endocrine System
 - Taste / RBC in Hypotonic Solution
- 40. Smooth muscle
 - Male genital tract
 - Vestibular system
- 41. Acid-base balance (kidney)
 - Pulmonary ventilation
 - Main features of the nervous system
